

Your iPhone as a High-Quality Windows Webcam — 100% in Safari

The Challenge

- ✗ Laptop webcams have poor low-light quality & low dynamic range.
- ✗ Commercial apps demand App Store installs, accounts & paid tiers.
- ✗ Cloud-relayed streams add 50–150ms latency and risk privacy.

The Iris Solution

- ✓ **Zero iPhone Installs:** Runs directly inside native iOS Safari.
- ✓ **Zero Cloud Latency:** 100% peer-to-peer over local home Wi-Fi.
- ✓ **Native Driver:** Directly recognized in Zoom, Teams, Meet & OBS.

TECHNICAL ARCHITECTURE & FEATURES

COMPONENT	IMPLEMENTATION	ADVANTAGE
Web Client	Vanilla WebRTC / WebKit in Safari	No App Store download; works on any modern iPhone.
Local PKI & Trust	On-device Root CA + .mobileconfig	100% offline, warning-free local HTTPS camera permissions.
Virtual Camera	C++ Windows Media Foundation Driver	Presents as a real hardware camera to Windows video apps.
Host Runtime	Single-File .NET 8 Executable	Portable, self-contained single .exe; runs from system tray.
Local Transport	Direct Wi-Fi WebSockets / WebRTC	Sub-30ms real-time response with zero cloud hops.

HOW IT WORKS (3 STEPS)

1

Run Iris on PC

Double-click `Iris.exe`. It sits quietly in the notification tray.

2

Open on iPhone

Open the local address in Safari and tap **Start Camera**.

3

Join Your Call

Select **Iris Camera** in Zoom, Teams, Meet or Discord.

C# .NET 8

C++ 17

WebRTC

WinForms / Tray

Windows Media Foundation
